GL Connect Overview

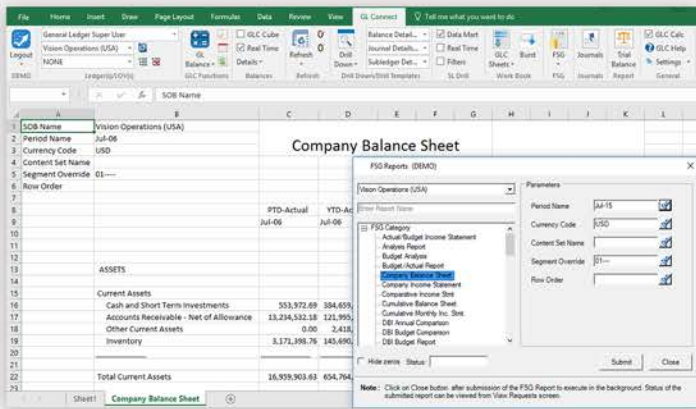

SplashBI presents GL Connect: a solution for analysts who need to build on-demand financial reports, reconciliations, and more, all with drill down capability! GL Connect enables end users to utilize Microsoft Excel as their front-end reporting tool integrating with Oracle EBS General Ledger.

Automatically Configures

- Oracle EBS Security
- Chart of Accounts
- DFFs and KFFs
- Hierarchies

Product Features:

- Subledger Drilldowns
- LOV Look-ups
- Journals & Budgets
- Live Balances

Easily Convert FSGs

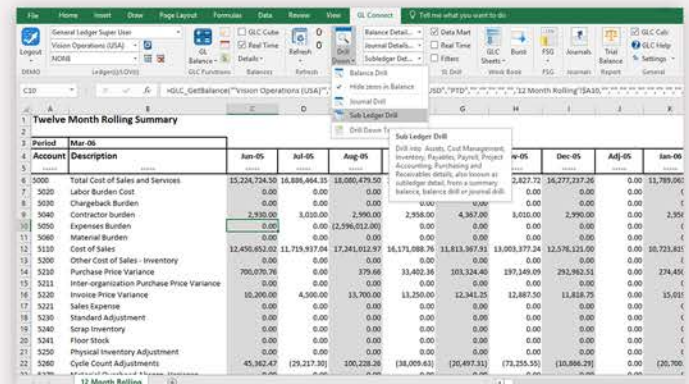

GL Connect has the ability to easily convert Oracle FSG reports into Microsoft Excel format. Once converted, users can quickly and easily research balances with GL Connect's drill down capability, which provides insight into balances, journal and even subledger details. GL Connect also honors Oracle EBS security, so data stays in safe hands. Refresh FSGs easily as often as needed to ensure your numbers are always up to date.

Analyzing data is just a click away. It is that easy!

Drill Down & Analysis

During month-end period close, one of the most tedious processes is the reconciliation and analysis of the accounts. GL Connect allows you to create your own reconciliation templates and upload them to share with your team. Refresh the balances as often as needed and easily drill down from the balance, to the journals, and all the way to the subledger with just a few clicks. Ad hoc queries are easy to build and can save you hours of running reports to get the information you need to close the books.

Budget Updates & Journal Entries

Create journal entry templates for recurring entries, as well as post one-time adjustments quickly and easily. GL Connect validates the entry and then uploads it for approval using your organization's workflows. GL Connect also allows users to create new or make changes to their budgets.
